Pipeline Company to Host Informational Open Houses Feb. 19 & 20 to Gather Public Input

Feb. 5, 2019 -- Williams is in the preliminary stages of developing an expansion of its existing Transco natural gas pipeline, allowing Pennsylvania gas producers to further connect robust supplies of natural gas in northern and western Pennsylvania with growing demand centers along the Atlantic Seaboard in time for the 2021-22 winter heating season.

The **Leidy South project** would include adding new compressor facilities along the existing Transco pipeline corridor in Hegins Township, Pa. (Schuylkill County) and in Fairmont Township, Pa. (Luzerne County), in addition to other facility additions in other counties. The project will ultimately expand the Transco pipeline's Marcellus and Utica takeaway capacity by 580,000 dekatherms per day – enough natural gas to meet the daily needs of approximately 2.5 million homes.

The proposal is currently in the planning phase. Williams is seeking early input from citizens, government entities and other interested parties to identify and address potential facility siting.

The company is hosting an informal open house on ***Tuesday, Feb. 19 from 6-8 p.m. at the Hegins Ambulance Association in Valley View, Pa.,*** and on ***Wednesday, Feb. 20 from 6-8 p.m. at the Irem Country Club in Dallas, Pa*** to provide additional information about the proposal and the federal regulatory process. Attendees will have an opportunity to review maps, ask questions to project team members and provide feedback. A representative from the Federal Energy Regulatory Commission (FERC) will be in attendance at the meeting.

Williams anticipates finalizing the project proposal and filing a formal application with the FERC in the summer of 2019.
